2025 NET LOSS (~\$34B NON-CASH)

\$518B

FORWARD COMPUTE OBLIGATIONS

OFFER TERMS (WHAT IS KNOWN)

Confidential draft S-1 submitted to the SEC on Jun. 1, 2026; no public S-1 on EDGAR as of Sep. 29.

Reuters reviewed the draft prospectus on Sep. 28.
Reported target valuation: above \$2T (vs. \$965B in the May Series H).

Reported bookrunners: Morgan Stanley, Goldman Sachs, JPMorgan, Citigroup; a \$15B revolving credit facility is being finalized.

Timing: earlier reports pointed to a mid-October roadshow; latest reports point to a listing after the U.S. midterms in November.

NOT YET DISCLOSED

Ticker and exchange.

Share count and indicative price range.

Primary vs. secondary split and use of proceeds.

Lock-up terms and reserved / directed-share allocation.

Cornerstone investors, if any.

Press speculation of a raise of up to ~\$100B is unconfirmed.

MARKET BACKDROP

SpaceX listed on Jun. 12, 2026 at \$135/share, raising over \$75B at a ~\$1.77T valuation - the largest IPO on record. OpenAI also filed confidentially in June; reports place its listing in 2027 at the earliest. Whichever frontier lab lists first sets the benchmark multiple for the sector.

COMPANY OVERVIEW

From safety-focused research lab to the leading enterprise AI platform

MISSION AND STRUCTURE

Anthropic builds the Claude family of AI models. It is a Delaware public benefit corporation (PBC), legally able to weigh its public-benefit mission alongside shareholder returns, and overseen in part by an independent Long-Term Benefit Trust.

FOUNDING & HISTORY**2021**

Founded in San Francisco by Dario Amodei, Daniela Amodei, Jack Clark, Sam McCandlish and Tom Brown (founding team as listed by Forge).

Mar. 2025

Valued at \$61.5B; Claude Code released publicly in May 2025.

Sep. 2025

Valued at \$183B.

Dec. 2025

Wilson Sonsini reportedly hired to prepare for an IPO; year-end run-rate revenue ~ \$9B.

Feb. 2026

\$30B Series G at ~\$380B; run rate \$14B; Claude Code run rate above \$2.5B.

May 2026

\$65B Series H at \$965B post-money; run rate above \$47B. Micron, Samsung and SK Hynix join as strategic partners.

Jun. 1, 2026

Confidential draft S-1 submitted to the SEC.

Jun.-Jul. 2026

Access to two flagship models (Claude Fable 5 and Mythos 5) suspended Jun. 12 under U.S. export controls; restored Jul. 1.

Sep. 2026

Opus 5.5 and Sonnet 5.5 released; Reuters reviews draft prospectus (Sep. 28); listing expected after the November midterms.

WHERE THE COMPANY IS TODAY

Headquartered in San Francisco; three cloud distribution partners: Amazon AWS, Google Cloud and Microsoft Azure.

Revenue is enterprise- and developer-led: an early Citi estimate put ~86% of 2025 revenue through the API.

INVESTMENT THESIS

Frontier model quality drives adoption, and adoption drives revenue. The draft prospectus states that customer usage and revenue follow new model releases.

Management argues AI will transform the economy more than industrialization, electricity or the internet.

(APR. 2026)

8 of 10

FORTUNE 10 ARE CLAUDE CUSTOMERS
(FEB. 2026)

100K+

CUSTOMERS VIA AMAZON BEDROCK

PRODUCT LINE & REACH

- Model families: Opus, Sonnet and Haiku; latest releases are Opus 5.5 and Sonnet 5.5 (Sep. 2026). A cybersecurity-capable model, Mythos Preview, is restricted to vetted customers.
- Claude Code (developer agent) exceeded a \$2.5B annualized run rate by Feb. 2026, with enterprise clients above half of it.
- Distribution: direct API, Claude apps (consumer and teams) and the three hyperscaler marketplaces. More than 40% of annualized revenue reportedly came via indirect channels in Q2 (SemiAnalysis estimate).
- Deliberate scope choices: the filing reportedly notes Anthropic forgoes image and video generation to preserve compute for core research and safety work.
- Hardware mix: Amazon Trainium (1M+ Trainium2 chips deployed), Google / Broadcom TPUs, and NVIDIA GPUs via Microsoft, SpaceX and Nscale.

04

BUSINESS MODEL

Usage-based revenue against a very large fixed-cost base

CORE MECHANIC

Anthropic sells model access mostly on a pay-per-token basis, plus subscriptions (Pro, Max, team and enterprise plans). Revenue scales with usage and model quality; costs are dominated by compute for training and inference, contracted years ahead. That duration mismatch is the central structural risk.

REVENUE SIDE

~\$4.59B recognized in 2025 (from \$386M in 2024).

Two customers each ~12% of 2025 revenue, neither on a long-term contract.

Gross vs. net treatment of cloud-reseller revenue is not yet confirmed; it changes both scale and gross margin.

COST SIDE

2025 operating expenses: \$12.65B, of which compute and infrastructure \$7.33B (~58%, ~1.6x revenue).

Operating loss / revenue improved from 7.7x (2024) to ~1.8x (2025).

Q2 2026 reportedly turned operating-profitable on an adjusted basis (excl. SBC); GAAP not yet confirmed.

FINANCIALS

Run-rate scaling, losses and the balance sheet

Run-rate revenue (\$B)

Annualized, as announced by the company or reported

**Valuation ladder (\$B)**

Post-money rounds; last bar is the reported IPO target

**Revenue vs. operating loss (\$B)**

FY2024 vs. FY2025 (draft prospectus, as reported)

Metric	Value
H1 2026 revenue	~\$16.3B (Q1 \$4.8B; Q2 ~\$11.5B vs. \$787M)
Cash, Dec. 31, 2025	\$20.28B
Raised since	\$30B (Series G) + \$65B (Series H)
2028 revenue forecast	\$190-200B (internal)

READING THE \$42B NET LOSS

Roughly \$34B of the 2025 net loss is a non-cash charge: the fair value of financings that can convert into shares rose as valuation climbed.

Under standard treatment those charges stop once the instruments convert at IPO. The \$8.06B operating loss is the cash-relevant starting point.

THE \$518B COMMITMENT

~71x 2025 compute expense, ~113x 2025 revenue, ~8x the late-July run rate; duration not yet specified.

Named contracts explain roughly half: Amazon (>\$100B over 10 years), Azure (\$30B), SpaceX (~\$45B) and Nscale. Some are cancelable, so backlog is not guaranteed spend.

VALUATION CONTEXT

At a \$2T valuation: ~436x 2025 revenue, ~31x the \$65B run rate, ~10x the mid-point of the 2028 forecast. Reported peers: Palantir ~53x and Cloudflare ~42x 2026 consensus revenue (mid-Aug.). The multiple only works if revenue roughly doubles in both 2027 and 2028 from an estimated ~\$49B 2026 base.

IPO STRUCTURE & GOVERNANCE

Control mechanics and what public shareholders would be buying

CONTROL

A single Class F share, directed by "Founder LLC" (the seven co-founders acting by majority), carries 50.1% of voting power on core corporate matters.

Class A shares for public investors carry one vote per share; strategic-partner shares carry de minimis votes. Four share classes besides F.

Sunset: super-voting rights lapse in stages if founders depart or fall to two or fewer.

BOARD (SEVEN SEATS)

Long-Term Benefit Trust elects four directors: a 4-3 board majority. Trustees include Ben Bernanke and Richard Fontaine.

Three seats (incl. Chair Daniela Amodei and CEO Dario Amodei) are elected by Class F and Class A together.

Founders pledged to donate 80% of their equity; 2025 pay: Dario Amodei ~\$18M, Daniela Amodei \$16.4M, mostly equity.

OPEN ITEMS TO CONFIRM IN THE PUBLIC S-1

- Share count, price range, primary vs. secondary split and use of proceeds.
- Lock-up period and any directed-share or cornerstone allocation.
- Revenue recognition (gross vs. net) and channel mix; GAAP gross margin.
- Annual schedule of the \$518B obligations and the cancelable portion.
- Whether top-two customer concentration diluted in H1 2026.

GOVERNANCE TAKEAWAY

Public investors would get economic exposure with limited governance power. The filing itself warns that the structure may lead to decisions that conflict with short- or long-term financial interests.

GROWTH, RISKS & COMPETITION

The analyst checklist: what could drive upside and what needs monitoring

GROWTH DRIVERS

- Continued frontier-model leadership (Opus 5.5 topped Artificial Analysis at 58 vs. GPT-6 Astra, narrowly)
- Claude Code and agentic workloads
- Enterprise expansion (1,000+ \$1M customers)
- New compute capacity unlocking backlogged demand
- Falling inference cost per task
- Consumer traction (Claude reached #1 on the U.S. App Store in Feb. 2026)

RISKS & THREATS

- Compute obligations vs. revenue durability
- Customer concentration; no long-term contracts
- Token price erosion and narrow model leads
- Litigation: \$1.5B authors settlement (Jul.); music-publisher suit (Aug.)
- U.S. defense supply-chain-risk designation; appeals court upheld one finding 2-1 on Sep. 25
- Export-control suspension of two models (Jun.-Jul.)
- Catastrophic-risk and model-control disclosures (~80 pages of risk factors)
- Macro / AI-equity drawdown ahead of listing

COMPETITIVE LANDSCAPE

Peer	Position (as reported)
OpenAI	Run rate ~\$40B (reported); valued at \$852B in March; filed confidentially in June; listing expected 2027 at the earliest.
Google DeepMind	Gemini models and TPUs; also an Anthropic shareholder and compute supplier.
xAI / SpaceX	Listed Jun. 12; also a compute supplier to Anthropic (~\$45B) and a rival model developer.
Microsoft / Amazon	Simultaneously distribution partners, investors and suppliers - circular capital flows.

CONCLUSION

A hyper-growth lab whose valuation depends on 2028

BOTTOM LINE

Anthropic reaches the IPO market with the fastest revenue ramp in the sector, an enterprise-heavy customer base and a compute bill that dwarfs today's revenue.

Revenue grew ~12x in 2025 to \$4.59B and the run rate passed \$65B by late July 2026, while the GAAP operating loss widened to \$8.06B. The reported \$2T target rests on an internal \$190-200B revenue forecast for 2028. Roughly \$518B of multi-year obligations means execution has little slack, and public shareholders would hold a minority of the votes.

Key items to confirm once the S-1 is public: gross vs. net revenue, gross margin, the obligations schedule, customer concentration, offer size, and lock-up terms.

READER NOTE

Figures come from press coverage of a draft prospectus (Reuters, CNBC, WSJ, Startup Fortune, 404K Research and others), plus company announcements. The S-1 was not public on EDGAR as of Sep. 29, 2026, so numbers are unaudited from this report's perspective and some secondary sources conflict. Run-rate revenue is not GAAP revenue. This report was prepared by Claude, which is made by Anthropic; verify everything against the final prospectus. Not investment advice.
